

UNINTERRUPTIBLE POWER SUPPLY

DESCRIPTION

NEVER USED, NEVER ASSEMBLED—These two UPS units—one AC and one DC—provide high quality power for electronic equipment loads.

They contain the following features:

- Increased power quality
- High input power factor
- Full compatibility with all types of loads
- Power black out protection
- 20 year lifetime expectation
- Operating temperature from 0 to 40* C

The UPS uses the double conversion topology. In the case of the AC unit, it converts AC power from an AC source into DC power to charge a battery and reconverts it into AC power to provide a clean and reliable AC output to power the AC mode.

See Appendix Lists for Data Sheets, Drawings and Packing lists for further info.
